Lab**

Let's make a list

and split it across slides

We can also use \LaTeX formatting commands such as `\\[2ex]`

► Point 1

Let's make a list

and split it across slides

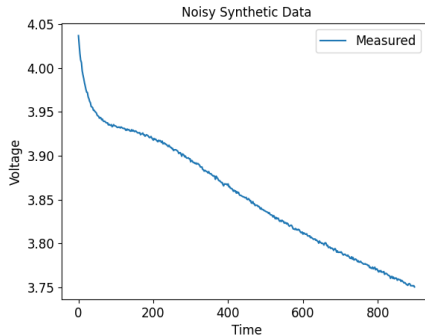

We can also use \LaTeX formatting commands such as `\\[2ex]`

- ▶ Point 1
- ▶ Point 2

Here's an example of including an image. It also shows how to use columns in Beamer.

And centered text!

Maths can be included in the usual way:

$$\mathbf{m}^{(g+1)} = \mathbf{m}^{(g)} + c_m \sum_{i=1}^{\mu} w_i \left(\mathbf{x}_{i:\lambda}^{(g+1)} - \mathbf{m}^{(g)} \right)$$

Including code

using a block

```
import numpy as np
import matplotlib.pyplot as plt
for i in range(0, 10):
    print(i)
```
